

stamp
pressed metal

Originally used on ceilings and gables in the early 1900's, pressed metal panels now feature as decorative interior and exterior walls, kitchen islands and splashbacks, bathroom and laundry walls, bed heads, shop counters, outdoor kitchens and BBQ areas.

Stamp Pressed Metal's decorative pressed tin panels add a stylish focal point to any heritage, commercial or home renovation project.

Our extensive range of designs suit modern and traditional settings - foyers, atriums, shops, restaurants, bars, cafes, offices and homes.

Durable and versatile

- Perfect for feature walls, splashbacks and ceilings.
- Heat and rust resistant, panels can be used outside for BBQ areas and gables.
- Can be painted any shade, or left in aluminium for a stainless-steel look.

Product details

Panel finishes

Our pressed tin panels are manufactured in Australia from premium-quality aluminium, which has an appearance similar to brushed stainless steel. If you like the metallic look, they do not need to be painted.

Although they are often referred to as pressed tin panels, today they are not made of tin, but of high-quality aluminium. This makes them very lightweight, but durable.

The panels can be supplied:

- in raw aluminium (they can still be etch primed by you and painted or powdercoated)
- most panels can also be pressed in copper (POA)

Panel sizes

Our panels come in a variety of sizes. However, most designs are available in 600mm high x 1800mm wide panels. Panel sizes are listed underneath each design.

Other product info

Pressed metal panels are designed to overlap, rather than butt up next to each other. They have an additional 10mm on all sides to allow for the overlap.

The panels are lightweight because the aluminium is just 0.6mm thick. An aluminium panel covering 1.5m² weighs only 2.2 kg.

The panels are capable of flexing with a structure and the overlapping joins allow the panels to expand and contract with outdoor temperature fluctuations.

Aluminium is non-combustible, but a good conductor of heat. So if you are using pressed metal as a splashback behind a gas hob, you will need to install fire proof wall board such as Promina underneath the panels. Please consult a gas fitter for advice.

Worried about installing your panels?

We are more than happy to give confident DIY'ers or your installer a helping hand. We provide full installation instructions with the panels.

But will answer any questions you may have about the process, tools or how to create different finishes.

So if you need some advice, just give us a shout. If you employ someone to install your panels, make sure they are good with finishing off.

You don't want someone who will "slap" the panels together. Choose a good builder, a cabinet maker or a shop fitter.

Ordering process and delivering your panels

We send anywhere within New Zealand.

Delivery costs depend on the size and number of panels that you order and your location. Once you have chosen your design, let us know the quantity you need and we will get back to you with a quote.

If we need to order panels from Adelaide Pressed Metal, your quoted price includes all costs associated with packaging, customs and foreign exchange. We do try to combine orders to keep international freighting costs to a minimum.

So let us know where you live when you contact us and we will help you get what you want in a safe, sound and timely manner.

We require full payment before the panels are ordered. We cannot refund your order if you change your mind, but normal consumer laws apply.

Please read our Terms and Conditions before ordering.

How to take care of your pressed metal panels

Our pressed aluminium panels are very lightweight, but durable. Unlike tin panels, they are rust resistant. Cared for in the right way they can last for an unlimited number of years.

Cleaning instructions

Panels can be damaged by abrasive cleaners or scourers. To clean, wipe with a microfibre cloth, spray and wipe, or polish with a soft polishing cloth.

Silicon-free furniture polish can also be used to create shine on the raw aluminium finish. It's suitable for wet areas such as bathroom walls, as long as the correct systems are followed.

Our designs

Pressed metal panels work in contemporary and traditional settings.

More recently these beautiful panels have become popular for modern renovation projects, new builds and commercial fit outs.

But because our heritage designs have been taken from original pressings, our panels are also perfect for restoring and repairing original pressed metal ceilings.

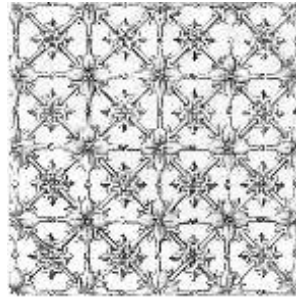

We have over 100 designs to choose from.
So we are sure you will find something that suits your project.
